Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Gain Circular Polarized Yagi Antenna competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of high gain circular polarized Yagi antennas will reach approximately 169,000 units, with an average unit price of approximately US\$662 per unit and a gross profit margin of approximately 27%. These antennas achieve circularly polarized radiation through a multi-element array and phase-fed structure. They feature high directional gain, multipath immunity, and excellent polarization matching. They are suitable for the 150 MHz, 350 MHz, 400 MHz, and 450 MHz frequency bands, with a standing wave ratio typically less than 1.5:1. They are used in satellite telemetry, tracking, and command center applications. They are primarily used in satellite communications, meteorological telemetry, ground relays, drone links, and VHF/UHF broadcast systems. Typical applications include telemetry arrays for beyond-visual-range surveillance systems for modern fighter jets and arrays consisting of 475 antennas, such as those used in Kyoto University's atmospheric observation radar. Medium-sized ground stations are typically equipped with two to four Yagi antennas, while conventional telemetry arrays can have four to eight. Upstream raw materials include aluminum alloy brackets, copper conductors, PTFE feeders, coaxial connectors, and waterproof dielectric covers, with raw material costs accounting for approximately 46%-50% of the total system cost. Downstream customers primarily include broadcast and communications operators, ground telemetry system integrators, aerospace communications departments, and research institutions. JAMPRO, with an annual production capacity of approximately 18,000 units, holds a leading position in the North American and Latin American broadcast and terrestrial satellite communications markets. The industry as a whole is moving towards high-gain, lightweight, and

reconfigurable arrays.

The global High Gain Circular Polarized Yagi Antenna market size was estimated at USD 111.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
