Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Heat ABS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. ABS is a kind of polymer obtained through the copolymerization of three kinds of monomers, namely acrylonitrile, butadiene and styrene. Each of these three monomers has a specific property: the addition of acrylonitrile can improve the anti-corrosion and rigidity properties, butadiene promotes the shock resistance and styrene will contribute the material good fineness. It is among the low cost engineering plastic that is easy to machine and fabricate. ABS is an ideal material for structural applications when impact resistance, strength, and stiffness are required. It is widely used for machining pre-production prototypes such as the auto dashboard since it has excellent dimensional stability and is easy to paint and glue. Natural (beige) ABS and black ABS are FDA compliant for use in food processing applications. Besides, it is widely used in the toys and electron industries including the PC enclosure. Heat resistant ABS (HH ABS) is a grade of ABS. It has the second highest strength and second lowest ductility compared to the other variants of ABS. This ABS resin offers superior heat resistance, shock resistance, and outstanding workability. It has wide-ranging use in items such as Automotive Usage parts, and electrical devices. In the report, the vicat softening temperature of high heat resistant is 109° and the vicat softening temperature of super high heat resistant is 115°. Currently, global production of High Heat ABS is relatively concentrated as there are only a few manufacturers engaged in the industry. The product belongs to the family of ABS resin, but owns much higher added-value than common ABS resin. The largest manufacturers LG Chem, Chi Mei, INEOS Styrolution, Formosa Chemicals, SABIC, Toray, etc. and the top six players account about 59% revenue market share. As for the region, China is the largest consumption country of

the High Heat ABS market, holding 37% market share, followed by Japan, Korea, etc. Among them, the High-end Consumer Electronics application market accounted for the world's largest market share, accounting for 30% of global High Heat ABS sales volume market share. High Heat ABS has excellent comprehensive performance, so it can be widely used in products that require high temperature resistance, such as electronic devices, office automation equipment, automotive, Household Appliances, industrial applications, etc. The competition among vendors will increase during the forecast period. Vendors will compete to deliver competitive advantages in the market on the basis of pricing, user-friendly interfaces, value-added benefits, and service portfolios. During the forecast period, we expect this competition to intensify with an increase in product extensions. Technological innovations have an important role in driving the growth of the market. To sustain in the competitive market, vendors should develop new ideas and technologies and stay up-to-date with the advanced technologies.

The global High Heat ABS market size was estimated at USD 1735.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
