The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Heat Resistant Film Capacitor for Automobile competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. High heat-resistant film capacitors for automobiles are capacitors designed specifically for automotive electronic systems, capable of reliable operation in harsh environments such as high temperatures, strong vibrations, and electrical noise. With the development of automotive electronics, intelligence, and electrification, the requirements for capacitors in automobiles are becoming increasingly high, especially in terms of high temperature resistance, vibration resistance, and long-term stability. In 2024, global High Heat Resistant Film Capacitor for Automobile production reached approximately 71.60 M Units, with an average global market price of around US\$ 37 per unit. The annual production capacity of a single production line is approximately 1 million units, with a gross profit margin of around 35%. Thin film capacitor is a type of capacitor that uses polymer film as the dielectric. In recent years, the commonly used method is to vapor deposit metalized thin films with internal electrodes onto thin films. Thin film capacitors can be classified based on their structure and type of dielectric. Firstly, the structure of thin film capacitors can be roughly divided into two types: "wound type" and "stacked type". The winding type is a structure in which a polymer film is wound and stamped, and then loaded into a shell. Stacking type is a structure in which multiple layers of polymer films are stacked together and then the stacked body is loaded into a shell. Due to its ease of manufacturing, wound film capacitors are currently the most commonly used type. With the acceleration of global electrification, the demand for high heat-resistant film capacitors in electric vehicles (EVs) continues to increase. Core components such as battery management systems and drive motor

controllers require high-performance capacitors for power management and circuit protection. With the advancement of autonomous driving technology, the demand for capacitors in automobiles is not limited to high temperature resistance, but also requires them to have higher accuracy and stability. This has driven the demand for high-performance capacitors.

The global High Heat Resistant Film Capacitor for Automobile market size was estimated at USD 2649.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
