Abstracts

High index lens monomer is an innovative material for lenses that offer a balanced set of characteristics-thinness, light weight, break resistance, and perfect clarity. In this report, high index means the index is above 1.67. Industry Trends: The current market is that the refractive index of resin lenses is generally between 1.49 and 1.74. The higher the refractive index, the thinner the lens. Therefore, more and more high myopia patients choose to use high refractive index lenses. As people's demand for high refractive index lenses increases, high refractive index lens monomers will be fully supported and maintain steady growth in the next few years. Market Drivers: Changes in lifestyle result in an increased number of people with eye conditions. For example, reduced time spent outdoors, increased near work and increased rates of urbanization, among other factors, may contribute towards a substantial increase globally in the number of people with myopia. The emergence of new entrants in the industry will promote the development and progress of the industry. Market Challenges? High technology barrier limits new entrants and more capacity releasing. Alternatives of high index lens monomer, such as 1.56 and 1.60 refractive index lens monomers, are cheaper and popular in the market.

The global High Index Lens Monomer market size was estimated at USD 79.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
