### Report Overview

High integrity pressure protection system (HIPPS) provides a novel approach to protect Process systems from over-pressurization. It is a safety instrumented system that provides protection to Process systems including pressure vessels and piping systems against over-pressure. The over-pressure may be caused due to upset conditions such as control valve failure, blocked outlet or other. Such upset conditions cause unbalanced flow of energy and material leading to accumulation of material or energy in the system giving rise to pressure rise situation. Over-pressure protection can be provided either by mechanical means or by instrumented means.
