Abstracts

A high-integrity pressure protection system (HIPPS) is a type of safety instrumented system (SIS) designed to prevent over-pressurization of a plant, such as a chemical plant or oil refinery. The HIPPS will shut off the source of the high pressure before the design pressure of the system is exceeded, thus preventing loss of containment through rupture (explosion) of a line or vessel. Therefore, a HIPPS is considered as a barrier between a high-pressure and a low-pressure section of an installation.

The global High Integrity Pressure Protection System market size was estimated at USD 656.56 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
