Report Overview

High Intensity Discharge (HID) lamps are a type of electric light that produces light by passing an electric current between two electrodes through a gas or vapor. HID lamps are known for their high efficiency and long lifespan compared to incandescent and fluorescent lamps. These lamps are commonly used in outdoor lighting, automotive headlights, sports arenas, and industrial settings where high levels of light output are required. HID lamps come in various types such as mercury vapor, metal halide, and high-pressure sodium lamps, each with specific applications and characteristics.

The market for HID lamps has been experiencing steady growth due to several market trends and drivers.
