Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Modulus Rutting-Resistant Additive competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global High Modulus Rutting-Resistant Additive sales reached approximately 740 k tons, with an average global market price of around US\$ 1700 per ton. The global annual production capacity of high modulus rutting-resistant additive is approximately 800,000 to 1 million tons, with mainstream manufacturers' single production line capacity ranging from 20,000 to 30,000 tons per year. High Modulus Rutting-Resistant Additive is a polymer-modified additive used to enhance asphalt pavement performance by improving mixture stiffness and deformation resistance, thereby extending road service life. The upstream supply chain involves petrochemical derivatives (e.g., SBS, PE) and nano-additives production, monopolized by chemical raw material enterprises; midstream is completed by specialty chemical companies through modification synthesis and formulation processing, with high technical barriers; downstream relies on road construction policies and asphalt mixing plant demand, driven by transportation infrastructure investments, and must meet dual standards of environmental protection and durability.

The global High Modulus Rutting-Resistant Additive market size was estimated at USD 1258.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
