## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Molecular Weight Polyisobutylene Succinimide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. High molecular weight polyisobutylene succinimide is a type of ashless detergent dispersant obtained by thermal addition of highly active high molecular weight polyisobutylene ( $M_n \approx 2300-2400$ ) to form polyisobutylene succinic anhydride via maleic anhydride, followed by condensation with polyamines. The product is a reddish-brown or brown viscous liquid, chlorine-free, and belongs to the high molecular weight PIBSI system. It is one of the core dispersant components in modern internal combustion engine oil formulations. The upstream core components include polyisobutylene (PIB), maleic anhydride, and polyene polyamines, while downstream applications are highly concentrated in the lubricant additive field. As a key ashless dispersant, it primarily serves the automotive industry (for modulating internal combustion engine oils), industrial lubrication, and other sectors. Global sales in 2024 were approximately 39,000 tons, with an average market price of approximately US\$2,700 per ton. The industry's gross profit margin ranges from 15% to 30%.

The global High Molecular Weight Polyisobutylene Succinimide market size was estimated at USD 105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
