## Abstracts

High NA lithography systems are the latest generation in EUV lithography. The 'NA' in the name refers to numerical aperture ? a measure of the ability of an optical system to collect and focus light. And it's called High NA EUV because the NA is increased from 0.33 to 0.55. Established EUV lithography works with a numerical aperture of 0.33. With High-NA-EUV lithography, the NA is 0.55. With a numerical aperture (NA) of 0.55, their innovative new optics provide higher contrast and print with a resolution of just 8 nm. Because the NA has become larger, the illumination system and projection optics must also be significantly larger. High NA lithography systems are currently only produced by ASML.

The global High NA EUV Lithography Systems market size was estimated at USD 724.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 58.70% during the forecast period.
