Abstracts

High - Performance NdFeB Plastic Magnets refer to a type of magnetic material that combines the excellent magnetic properties of neodymium - iron - boron (NdFeB) with the flexibility and processability of plastics. NdFeB is a well - known high - performance magnetic material known for its strong magnetic field strength. In these composite magnets, NdFeB magnetic powder is dispersed within a plastic matrix. The plastic serves as a binder, allowing for easy shaping and molding of the magnet into various complex geometries through techniques such as injection molding or extrusion. These magnets maintain a relatively high magnetic performance, including high remanence, coercivity, and energy product, while also offering advantages such as lightweight, corrosion - resistance, and good mechanical properties due to the presence of the plastic component. They are widely used in applications such as automotive components, consumer electronics, sensors, and small motors where a combination of magnetic performance and design flexibility is required.

The global High Performance Ndfeb Plastic Magnets market size was estimated at USD 713.43 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
