Report Overview

High-performance steel-based self-lubricating bearing is a bearing with excellent performance. It uses high-performance steel as the base material and is coated with a layer of self-lubricating material on the surface to achieve self-lubrication and long service life of the bearing. Self-lubricating materials are usually composite materials composed of one or more solid lubricants and one or more polymer materials, which have good wear resistance, corrosion resistance and fatigue resistance. High-performance steel-based self-lubricating bearings can not only operate stably under harsh working conditions such as high temperature, high speed, and high load, but can also reduce the number of bearing maintenance and replacements and reduce equipment maintenance costs.
