Abstracts

High permeability core refers to a material with high permeability. The core made of this material can concentrate and conduct magnetic field more effectively under the action of magnetic field. High permeability core is mainly made of magnetic materials with high permeability, such as ferrite, amorphous material or nanocrystalline material. Magnetic permeability is a physical quantity that measures the magnetic conductivity of materials. High permeability means that the material can produce a larger magnetic induction intensity under a smaller magnetic field strength. In high-frequency applications, high permeability cores show low loss characteristics, which helps to reduce energy loss during transmission and improve the efficiency of equipment.

The global High Permeability Core market size was estimated at USD 3093.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.70% during the forecast period.
