Abstracts

High Power Charging (HPC) refers to a fast electric vehicle (EV) charging technology that delivers significantly higher power levels than conventional charging systems, typically ranging from 150 kW to 350 kW or more. HPC systems are designed to rapidly charge compatible electric vehicles, allowing them to regain a substantial amount of battery capacity in a short period—often providing 80% charge in 20-30 minutes, depending on the vehicle's battery size and state of charge. HPC technology utilizes advanced connectors and charging infrastructure, such as the Combined Charging System (CCS) or CHAdeMO, which can accommodate higher voltage and current levels. These charging stations are strategically placed along highways and in urban areas to support long-distance travel and enhance the convenience of EV ownership.

The global High Power Charging (HPC) market size was estimated at USD 61.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 56.00% during the forecast period.
