Abstracts

High power industrial femtosecond laser is a type of laser that can generate extremely short pulses and has high power output. Compared with lasers, femtosecond lasers have the characteristic of being able to concentrate a large amount of energy in an extremely instantaneous manner, which can enable materials to undergo instantaneous heating, drying, evaporation and other reactions under the action of laser pulses. Due to their ultra short pulse width, they can avoid the diffusion of thermal effects, making the processing process highly accurate and locally controllable.

The global High Power Industrial Femtosecond Laser market size was estimated at USD 329.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
