Abstracts

A high-precision ADC is a chip that can convert input analog signals into digital signals. Its main features are that it can provide high-resolution, high-speed and high-precision analog-to-digital conversion, and has strong noise resistance and linearity. With the continuous development of technologies such as 5G and AIOT, as well as the rapid growth of automotive electronics, industrial automation and other fields, the demand for high-precision ADCs will continue to increase. These fields have high requirements for data accuracy and speed, so the market prospects for high-precision ADCs are broad. At present, leading European and American companies have almost monopolized the domestic and foreign markets with their historically accumulated cost and technological advantages. However, with the continuous rise of domestic manufacturers and technological breakthroughs, the pace of domestic substitution is accelerating.
