## Abstracts

High-precision GNSS positioning service is a service that uses the Global Navigation Satellite System (GNSS) to provide users with centimeter-level or even millimeter-level high-precision location information through a series of technical means and processing methods. GNSS includes satellite navigation systems such as the United States' GPS, China's BeiDou (BDS), Russia's GLONASS, and Europe's Galileo. The service receives satellite signals, processes and calculates the signals, eliminates or weakens the influence of various error sources (such as satellite orbit errors, clock errors, ionospheric delays, tropospheric delays, etc.), and obtains high-precision positioning results.

The global High Precision Gnss Positioning Services market size was estimated at USD 1641.39 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
