Abstracts

High Pressure Pascalization Equipment, also known as High Pressure Processing (HPP) equipment, is a non-thermal food and beverage preservation technology that uses extremely high pressure (typically around 400-600 MPa or 58,000-87,000 psi) to inactivate bacteria, yeasts, molds, and other pathogens. This process extends shelf life and maintains the taste, texture, and nutritional quality of products without the need for chemical preservatives or high temperatures. Foods are packaged and placed in a chamber where water is used to apply uniform pressure, ensuring safety and freshness while preserving natural characteristics.
