Abstracts

Gallium is a light blue metal that turns into a silvery white liquid at 29.76°C. It is mainly associated with bauxite or sphalerite. With the advancement of metal purification technology, the purity of high-purity metals used in various high-end fields has gradually transitioned from 4N to 5N and 6N, and some application fields have even reached 7N (such as electronic semiconductors). Its purity determines the performance of the application process. The higher the purity, the fewer impurities, and the higher the performance of the material. Industrial gallium is mainly recovered and extracted from zinc smelting waste residue and aluminum smelting waste residue. Using industrial-grade metal gallium as raw material, it is further purified by electrolysis, vacuum distillation, fractional crystallization, and zone melting to produce high-purity gallium. High-purity gallium is currently mainly used in the preparation of compound semiconductor materials such as GaN, GaAs, GaP, and GaSb, the doping of semiconductor materials such as silicon and germanium, and the production of alloy materials such as gallium-magnesium alloys. With the large-scale application of GaN third-generation semiconductors, the quality of semiconductor materials such as GaAs, silicon, and germanium has improved. As an important component, high-purity gallium has put forward higher requirements for its key performance indicators. Global key players of High Pure Gallium include DOWA Electronics, Vital Materials, Zhuzhou Keneng New Material, Beijing Tongmei Xtal Technology, East Hope, etc. The top five players hold a share over 78%. Asia-Pacific is the largest market, and has a share about 79%, followed by Europe and North America with share 12% and 9%, separately. In terms of product type, 7N is the largest segment, occupied for a share of 61%. In terms of application, Semiconductor has a share about 70 percent.

The global High Pure Gallium market size was estimated at USD 111.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the

forecast period.
