## Abstracts

High Purity 2 Phenylphenol, also known as ortho-phenylphenol (OPP), is a synthetic organic compound characterized by its high degree of chemical purity, typically exceeding 99%, which minimizes impurities to ensure suitability for sensitive applications. It is primarily valued for its potent antimicrobial and preservative properties, serving as a key active ingredient in disinfectants, sanitizers, and fungicides, particularly in agriculture for post-harvest treatment of fruits and vegetables to prevent mold and decay. Additionally, it finds use in industrial settings as a preservative for textiles, wood, and adhesives, and occasionally in the synthesis of specialty chemicals, where its purity is critical to avoid side reactions or contamination. The compound's efficacy, stability, and low volatility underpin its functional utility across these domains. The market for High Purity 2 Phenylphenol is driven by rising demand from the agriculture and food industries, where it is used as a post-harvest fungicide to extend the shelf life of produce, especially in regions with stringent food safety standards and growing export-oriented agriculture. Increasing awareness of hygiene and disinfection, accelerated by global health concerns, has further bolstered its use in industrial and household disinfectants. Geographically, North America and Europe represent significant markets due to strict regulatory frameworks and advanced agricultural practices, while Asia-Pacific is emerging as a high-growth region, fueled by expanding food processing capabilities and increasing agricultural productivity. Key players include LANXESS, Dow Chemical, and Jiangsu Run You Chemical Industry, who focus on product innovation and compliance with environmental and safety regulations, though the market faces challenges such as regulatory scrutiny over chemical residues and competition from alternative biocides. Overall, the market is expected to grow steadily, supported by its essential role in food preservation and sanitation, though sustainability trends may drive demand for greener alternatives in the long term.

The global High Purity 2 Phenylphenol market size was estimated at USD 25.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
