Abstracts

High purity cerium oxide refers to cerium dioxide (CeO_2) with a minimum purity level typically exceeding 99.99%, characterized by its fine particle size, narrow size distribution, and minimal trace impurities, making it suitable for specialized industrial and technological applications where standard-grade cerium oxide would be inadequate. This advanced material exhibits unique properties such as high oxygen storage capacity, catalytic activity, ultraviolet absorption, and chemical-mechanical polishing efficiency, which are leveraged across sectors including semiconductors, optics, automotive catalysts, energy storage, and biomedical devices. Its performance is highly dependent on precise control over crystalline structure, surface area, and contaminant levels, distinguishing it from lower-grade variants used in more conventional applications like glass polishing or decolorizing.

The global High Purity Cerium Oxide market size was estimated at USD 280.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
