Erythritol is a new type of sugar alcohol food sweetener, which exists naturally in seaweed, mushrooms, melons and fermented foods, and has long been a component of human diet. Erythritol has the characteristics of good crystallinity, low hygroscopicity, low calories, high stability, harmonious sweetness, non-hygroscopicity, low freezing point, non-carries, and no gastrointestinal discomfort. Erythritol does not participate in sugar metabolism and is suitable for diabetics. It can be used as an alternative sweetener for diabetics; in addition, erythritol is very stable to heat and acid, and under general food processing conditions, it will hardly show browning or decomposition. As a new type of functional food sweetener, erythritol is widely used in the food processing industry, especially in the processing of high-end healthy foods such as sugar-free and zero calorific value. In addition, it is also used in the fields of functional foods such as special medical foods and diabetics. High-purity crystalline erythritol, the purity is above 99.5%.
