Report Overview

High Purity Fused Quartz is produced by fusing (melting) high-purity silica sand, which consists of quartz crystals. High Purity Fused Quartz is a glass consisting of almost pure silica (silicon dioxide, SiO₂) in amorphous (non-crystalline) form. This differs from all other commercial glasses in which other ingredients are added which change the glasses' optical and physical properties, such as lowering the melt temperature. Fused quartz, therefore, has high working and melting temperatures, making it less desirable for most common applications.
