Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Purity Graphene Pastes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. High Purity Graphene Pastes are semi-solid formulations composed primarily of high-purity graphene particles dispersed in a carrier medium such as organic solvents, polymers, or aqueous binders. These pastes are engineered to exhibit excellent electrical and thermal conductivity, mechanical strength, and processability for coating or printing applications. The "high purity" aspect typically refers to graphene content with low levels of metallic or carbonaceous impurities (often >99% carbon purity), minimal defects, and a well-defined flake size distribution (ranging from nanometers to a few micrometers). High Purity Graphene Pastes are widely used in advanced electronic components, printed electronics, conductive inks, flexible displays, sensors, energy storage devices (like supercapacitors and batteries), EMI shielding coatings, and thermal interface materials. They support techniques such as screen printing, inkjet printing, and extrusion-based deposition for integration into next-generation electronic and energy systems.

The global High Purity Graphene Pastes market size was estimated at USD 374.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
