Abstracts

Hexachlorodisilane, with the molecular formula Si_2Cl_6 , is abbreviated as HCDS, also known as hexachlorodisilane and hexachlorodisilane. Hexachlorodisilane is a colorless, transparent liquid with stable performance and low volatility. It reacts violently with water and is insoluble in alcohols and strong bases. Hexachlorodisilane belongs to chlorosilane and is one of the products with higher application value among oligomeric chlorosilanes. It is an organic intermediate that can be used to prepare products such as disilane and can also deposit thin films. The semiconductor and solar energy industries are its important downstream markets. The purity of high-purity hexachlorodisilane is >99%. It is used as a precursor for chemical vapor deposition (CVD) and atomic layer deposition (ALD) in the semiconductor field, and can also be used as a precursor in the solar energy field. It is also used in the optical fiber and aerospace fields. High-purity hexachlorodisilane has stable performance and low volatility. It is mainly used as a precursor material for the deposition of silicon oxide films, silicon nitride films, etc. in the semiconductor field. It has broad application prospects in the fields of semiconductors, optoelectronic materials, etc. In recent years, benefiting from the accelerated transfer of the semiconductor industry to mainland China, as the world's largest consumer market for semiconductor terminal products, the scale of China's semiconductor industry has continued to expand, the market for high-purity hexachlorodisilane has become more prosperous, and the demand growth rate has been at a relatively high level. At present, the production market of high-purity hexachlorodisilane is mainly concentrated in Japan, South Korea, the United States, Germany, etc. High-purity hexachlorodisilane is a silane semiconductor precursor and can be used in the semiconductor industry, solar energy industry, optical fiber, etc. Toagosei is the world's first company to industrially produce hexachlorodisilane. With the improvement of production technology and the development of the downstream semiconductor industry, more and more manufacturers are entering the industry, such

as DNF and DS Techopia in South Korea, Dupont in the United States, and Evonik in Germany. The semiconductor industry is the main application field of high-purity HCDS. As a cutting-edge technology and high value-added industry, the semiconductor industry has a great impact on other industries. It is a key technology industry with great strategic significance in the entire national economy. Therefore, governments around the world regard it as a national backbone industry.

The global High Purity Hexachlorodisilane market size was estimated at USD 222.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
