Report Overview

A laboratory gas generator is a system that delivers a continuous supply of purified gas directly to a system that requires the use of a particular gas, such as gas chromatograph, GC-MS, FTIR, ion mobility spectrometer, gas analyzer, environmental chamber, or applications requiring clean, dry gas. Laboratory gas generators completely eliminate the safety hazards typically involved with handling high pressure cylinders. Many of these lab gas generators are hassle-free automated systems that do not require tanks to change or downtime. Some models offer a compact, portable design, which is ideal for any mobile laboratory. The type of gas provided by a specific gas generator can vary from model-to-model. Lab gas generator systems are available for the generation of many different gases including, nitrogen, hydrogen, calibration gas, compressed air, zero air, zero nitrogen, zero hydrogen, and purge gas. Aside from the type of gas generator required for an application, other key features include flow rate of the gas and operating temperatures; depending on the model.
