Report Overview:

Hydrogen bromide is a colorless compound. It is a hydrogen halide due to the existing diatomic hydrogen compound bonded to bromine. Hydrogen bromide is produced by combining hydrogen and bromine at a temperature of 200 C. Hydrogen bromide is a water-soluble gas in the form of an aqueous solution. Anhydrous solutions of hydrogen bromide are used to produce several gases, including bromide compounds. Hydrogen bromide is widely used as a catalyst as well as a reducing agent in a number of organic and inorganic chemical reactions. It is widely used in the preparation of various industrial gases. Hydrogen bromide is an essential reagent for the synthesis of inorganic and organic bromide compounds. It is widely used in combination with hydrogen chloride for polysilicon plasma etching and in other corrosive processes. HBr gas is used in dry etching. Br ion is heavy, which can produce strong ion bombardment effect. The etching speed is fast, and it has high selectivity for silicides. Moreover, HBr gas is easy to form polymers on the side, protect the side wall, and etch a very flat side wall when it helps etching.
