Abstracts

High purity nitrous oxide, often referred to as N₂O or "laughing gas," is a specialized gas compound with a minimum purity level typically exceeding 99.9%, making it suitable for applications where impurities could compromise safety, efficacy, or performance. It is distinct from lower-grade nitrous oxide used in industrial or automotive contexts, as its stringent purification processes remove contaminants such as moisture, hydrocarbons, and other trace gases. This grade is essential in medical settings for anesthesia and analgesia, in the semiconductor industry for plasma etching and chemical vapor deposition, and in food processing as a propellant and preservative, with quality standards often governed by pharmacopeial or technical specifications like USP (United States Pharmacopeia) or electronic grades.

The global High Purity Nitrous Oxide market size was estimated at USD 245.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
