Abstracts

High purity tellurium metal refers to a refined form of tellurium—a brittle, silvery-white metalloid element—with a minimum purity level typically exceeding 99.99% or 99.999% (4N to 5N), produced through specialized purification processes such as zone refining, vacuum distillation, or chemical vapor transport to remove trace impurities like selenium, sulfur, or metallic residues, making it suitable for demanding applications in electronics, thermoelectric devices, solar panels (specifically cadmium telluride thin-film photovoltaics), and infrared optical materials where even minor contaminants can significantly degrade performance, thermal stability, or electrical properties.

The global High Purity Tellurium Metal market size was estimated at USD 500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
