High Purity Tetramethylammonium Hydroxide or Electronic Grade

Tetramethylammonium Hydroxide (TMAH) is a high-purity organic compound specially used in precision manufacturing processes in the electronics industry. Electronic grade TMAH must meet the stringent requirements of the semiconductor and microelectronics manufacturing industries and has high purity. It is mainly used in photoresist developers, silicon wafer etchants, ultra-pure cleaning agents, etc. in the electronic semiconductor and Display industries. Tetramethyl Ammonium Hydroxide (TMAH) mainly has industrial grade and electronic grade. Although the price difference between the two is not big, the fundamental difference lies in the different impurity content. Conventional TMAH can only be used in low-end markets such as organosilicon catalysts; while high-end markets, such as semiconductors, require higher-grade TMAH, and the impurity content and product performance meet the semiconductor grade requirements. At present, electronic-grade TMAH occupies a large market share, which accounted 96% share in 2023, and is expected to maintain its leading position in the next few years. From the perspective of TMAH downstream applications, TMAH itself can be directly used as a developer in the Display and semiconductor industries. Downstream customers usually choose TMAH with different contents according to specific application scenarios. 25% TMAH is generally used in the electronics field, and 2.38% TMAH is also used in the semiconductor field, but the proportion is small and not very cost-effective. TMAH is widely used as a developer in photolithography processes, which are essential for semiconductor fabrication. The increasing demand for semiconductors, driven by the proliferation of electronic devices and advancements in technology (like 5G and IoT), is boosting the TMAH market. In High Purity Tetramethylammonium Hydroxide market, the Semiconductor holds an important share in terms of Application, and it is expected to reach a value of US\$ 726.23 million by 2030, at a CAGR of 6.85% during 2024 and 2030. It is expected that with the growth of

the scale of the semiconductor industry, the share of High Purity Tetramethylammonium Hydroxide in the semiconductor market will reach 70% in 2030. In the other hand, as the microelectronics industry grows, the demand for TMAH as a photoresist developer and etching agent is also rising. The need for smaller, more efficient electronic components is driving innovations in microfabrication techniques, further increasing TMAH usage.

The global High Purity Tetramethylammonium Hydroxide market size was estimated at USD 704.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
