## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High-rate Polymer Lithium Battery competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of high-rate polymer lithium batteries will reach 704.74MWh, with an average selling price of US\$115/kWh. High-rate polymer lithium battery is a new type of lithium-ion battery that combines high-rate characteristics and the advantages of polymer lithium batteries. High rate refers to the ability of the battery to release or accept a large amount of electrical energy in a short period of time, that is, the battery's charge and discharge current ratio (usually represented by "C") is high. For example, for a high-rate battery, it may support charging and discharging currents several times its rated capacity. The full name of polymer lithium battery is polymer lithium-ion power lithium battery, which is a type of lithium-ion battery. Polymer lithium batteries are favored for their high energy density, good safety and stability. Therefore, high-rate polymer lithium batteries are a new type of battery with excellent charging and discharging performance formed by combining high-rate characteristics with polymer lithium battery technology. Due to its excellent performance, high-rate polymer lithium batteries are mainly used in fields that require high energy output and fast response, such as power systems of drones, electric vehicles, various aircraft models and remote control model cars. These application fields have high requirements for battery energy density, charging and discharging speed, and safety, and high-rate polymer lithium batteries can just meet these needs. The main application areas of high-rate polymer lithium batteries include energy storage batteries, consumer batteries and power batteries. Among them, the rapid development of new energy vehicles is one of the important factors driving the growth of demand for high-rate lithium batteries. With the trend of thinner and portable consumer

electronic products and the improvement of battery performance requirements for energy storage systems, high-rate polymer lithium batteries are increasingly widely used in these fields. In addition, with the continuous advancement of material science, battery technology and production processes, the performance of high-rate polymer lithium batteries has been significantly improved. For example, by adopting new polymer electrolytes and optimizing battery structure design, the energy density, cycle life and safety performance of batteries have been improved. In summary, the high-rate polymer lithium battery market is currently in a rapid development stage and will continue to grow in the future.

The global High-rate Polymer Lithium Battery market size was estimated at USD 81.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
