## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High-resolution X-ray 3D microscopy system competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The high-resolution X-ray 3D microscopic imaging system uses X-rays to penetrate the sample, and the detector collects different absorption signals to achieve full-field X-ray imaging. It can perform non-destructive testing on the internal structure of the material, and perform 3D reconstruction and slice characterization. The application scope includes: composite materials, porous materials, building materials, rock 3D pore structure, feature extraction and quantitative analysis and statistical distribution; additive manufacturing, metal, ceramic internal defect detection; generation of 3D mesh models for numerical simulation or 3D printing; failure analysis of batteries, chips, thermoelectric materials; orientation analysis of fiber materials; animal and plant histological imaging analysis; in-situ characterization of material tensile or compression fracture behavior and heating tests.

The global High-resolution X-ray 3D microscopy system market size was estimated at USD 84.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
