The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Rigidity PSU Plastic competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of High Rigidity PSU Plastic reached 58,000 tons in 2024, with an average selling price of \$12,500 per ton. High Rigidity PSU (Polysulfone) plastic is a high-performance specialty engineering plastic. Through molecular structure optimization and enhanced modification technology, it significantly improves flexural modulus and mechanical strength while maintaining the inherent high temperature resistance, hydrolysis resistance, and excellent dimensional stability of PSU materials. Its heat deflection temperature can reach 180-205°C, with a long-term use temperature of 160°C. It also exhibits outstanding creep resistance and chemical resistance, and can achieve an ultra-high rigidity with elastic modulus exceeding 10,000MPa through reinforcement with materials such as glass fiber or carbon fiber. This material is primarily used in precision components requiring structural stability and heat resistance, such as medical device sterilization trays, aerospace interior parts, automotive engine peripheral components, and electronic electrical insulation parts in high-end fields.

The global High Rigidity PSU Plastic market size was estimated at USD 725.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.
