Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High-Rubber High Impact Polystyrene (HIPS) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global High-Rubber HIPS production reached approximately 2.43 million tons, with an average global market price of around US\$ 1,780 per ton. The gross profit margin of major manufacturers ranges from 16% to 28%. Single-line production capacity typically ranges from 60,000 to 150,000 tons per year, depending on polymerization technology and rubber-grafting efficiency. High-rubber high impact polystyrene is a modified PS material containing a high proportion of rubber particles, providing superior toughness, impact strength, and dimensional stability compared with standard polystyrene. It is widely used in household appliances, food packaging, toys, and electronic housings due to its excellent moldability and cost-effectiveness. The material delivers balanced rigidity and impact resistance, making it suitable for both thin-wall and structural applications. The industrial chain includes upstream suppliers of styrene monomers, polybutadiene rubber, initiators, stabilizers, and additives. Midstream manufacturers carry out bulk polymerization, rubber grafting, compounding, pelletizing, and quality inspection. Downstream applications include appliance producers, packaging manufacturers, electronics companies, toy makers, and furniture component suppliers.

The global High-Rubber High Impact Polystyrene (HIPS) market size was estimated at USD 4320.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
