Abstracts

High shrinkage acrylic fiber is a specialized synthetic fiber variant engineered to exhibit significantly higher shrinkage properties—typically 15-40%—compared to conventional acrylic fibers when subjected to heat or steam, achieved through modified polymer composition, spinning techniques, or post-treatment processes; this controlled shrinkage enables the creation of unique fabric textures, bulkiness, and dimensional stability, making it particularly valuable in applications such as high-pile faux fur, plush toys, blankets, upholstery, and specialized technical textiles where loft, softness, and surface effects are critical performance attributes. The global market for high shrinkage acrylic fiber is a niche yet steadily growing segment within the broader synthetic fibers industry, driven primarily by demand from the textile and home furnishings sectors, particularly in regions with strong manufacturing bases such as Asia-Pacific (led by China, India, and Japan), North America, and Europe; key growth factors include rising consumer preference for soft, lightweight, and aesthetically versatile fabrics, increased adoption in automotive interiors and premium apparel, and ongoing innovation in fiber technology enhancing performance characteristics like dyeability, durability, and environmental sustainability. Market expansion is also supported by the material's cost-effectiveness relative to natural alternatives like wool, though it faces challenges from volatile raw material (acrylonitrile) prices, stringent environmental regulations concerning synthetic fiber production, and growing competition from other specialty synthetic fibers; nevertheless, strategic investments in research and development—focusing on recycled and bio-based acrylic variants—coupled with expanding applications in technical and industrial textiles, are expected to sustain moderate growth in the coming years.

The global High Shrinkage Acrylic Fiber market size was estimated at USD 480.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of

4.80% during the forecast period.
