Abstracts

High Speed Automatic Emergency Braking (AEB) systems are advanced driver-assistance technologies designed to prevent or mitigate collisions by automatically applying brakes when an imminent frontal crash is detected, particularly at higher speeds where human reaction times may be insufficient. These systems typically rely on a combination of sensors?such as radar, lidar, and cameras?to monitor the road ahead, assess potential hazards, and initiate braking without driver intervention if a threat is identified and the driver fails to respond. High Speed AEB is specifically calibrated for scenarios at highway speeds (generally above 55 km/h or 34 mph), distinguishing it from low-speed urban AEB systems, and is engineered to reduce the severity of accidents or avoid them entirely through rapid, precise deceleration even under demanding driving conditions.

The global High Speed Aeb System market size was estimated at USD 1526.48 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
