### Report Overview

A high-speed camera is an image capturing device that is equipped to capture frames exceeding 250 frames per second. The image exposure exceeds 1/1,000. High-speed cameras are mostly used to capture fast moving objects as images that are stored in storage devices. After they are stored, these images can be played back in slow motion. Modern high speed cameras are electronic and are either a CMOS active pixel sensor or a charged couple device (CCD) which typically captures 1,000 frames per second. Usually, high speed cameras can be segregated into four categories – high-speed film camera that captures to film, high-speed video cameras that record to electronic memory, high-speed framing cameras that record images on multiple planes or multiple locations on a single plane, and high-speed streak cameras which records line sized image series to electronic memory or film.
