## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High-speed SerDes Chip competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. High-speed SerDes Chip is a high-performance serial/deserializer designed for automotive and communications applications, enabling low-latency, high-bandwidth data conversion with robust electromagnetic immunity and automotive-grade reliability. In 2024, the production of High-speed SerDes Chip was 221.6 million units with an average price of 2.5 USD per unit. The single-line annual capacity was approximately 0.5 million units and the average gross margin was about 58%. Upstream materials and equipment include wafers, substrates, packaging materials and precision manufacturing tools such as lithography machines, etchers and ion implanters, with representative suppliers including SUMCO, GlobalWafers, Shin-Etsu, ASML, Applied Materials, Lam Research and Chinese suppliers such as Shanghai Silicon Industry Group, AMEC and JCET. The midstream emphasizes process and design implementation, covering physical layer IP integration, analog front-end and mixed-signal circuit design, packaging and test flow development, and signal integrity and reliability verification. Downstream targets commercial vehicles and passenger cars with representative customers such as Daimler, Volvo Trucks, Cummins, SAIC Motor and Geely. Automotive-grade SerDes chips are positioned for accelerated adoption driven by the proliferation of multi-camera and multi-sensor ADAS/automated driving suites and the shift to high-bandwidth in-vehicle Ethernet architectures. Standardization efforts and open ecosystem initiatives are reducing integration friction and unit costs, while technical requirements for low latency, deterministic links and automotive reliability create a high-barrier moat for qualified suppliers ? making SerDes not only a technical enabler for next-generation domain controllers but also an attractive, long-term market

segment for semiconductor vendors and tier-1 suppliers.

The global High-speed SerDes Chip market size was estimated at USD 554.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.00% during the forecast period.
