Abstracts

High-speed steel single-angle milling cutter is a specific industrial milling cutter, mainly made of high-speed steel. High-speed steel is an alloy steel with high hardness, high wear resistance and high heat resistance, which is particularly suitable for manufacturing cutting tools. High-performance high-speed steel milling cutters often use M42 material, which has a high cobalt content (8%). The addition of cobalt can increase the hardness of the matrix and thus improve wear resistance. The notable feature of a single angle milling cutter is that its teeth are at a single angle, with common angles including 45 degrees, 60 degrees and 90 degrees. This design allows it to mainly process various angles and is suitable for milling angle grooves. With the rapid development of manufacturing and processing industries, high-speed steel single-angle milling cutters, as one of the important sub-products of milling cutters, have also shown a steady growth trend. High-speed steel single-angle milling cutters are widely used in metal processing, machinery manufacturing, mold manufacturing, automotive parts processing and other fields. Due to its excellent cutting performance and long service life, it is favored by the majority of users. With the continuous advancement of manufacturing technology, high-speed steel single-angle milling cutters continue to innovate in materials, coatings, manufacturing processes, etc. For example, the use of new high-speed steel materials, optimization of coating technology, and improvement of manufacturing processes can further improve the cutting performance and service life of milling cutters. In summary, the high-speed steel single-angle milling cutter market shows a steady growth trend.

The global High Speed Steel Single Angle Milling Cutter market size was estimated at USD 3102.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
