Abstracts

High-speed transmission build-up resins are specialized materials used in advanced electronics, particularly in the manufacturing of printed circuit boards (PCBs) for high-frequency and high-speed data transmission applications. These resins are critical in ensuring signal integrity, low dielectric constant, and high thermal stability, making them essential in the production of PCBs for industries like telecommunications, automotive, aerospace, and computing. Epoxy resin compounds for encapsulation of semiconductor devices are used to protect the semiconductor devices from mechanical force, humid, heat and ultraviolet rays et al. As semiconductor packages are getting more sophisticated, smaller, and high density, they are required to offer improved performance and functionality. Recently, with the increasing global environmental awareness, the requirements for epoxy resin compounds for encapsulation of semiconductor devices have become environment responsive and energy saving.

The global High-speed Transmission Build-Up Resin market size was estimated at USD 85.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.20% during the forecast period.
