## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Styrene Rubber (HSR) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. High styrene rubber is a non-polar mixture of white granular particles, belonging to a special variety of styrene butadiene rubber series. It is called high styrene rubber or high styrene resin due to its high content of bound styrene, commonly known as hard rubber. It is a non-polar polymer formed by copolymerization of high content styrene monomer and butadiene monomer with lotion polymerization technology. High styrene rubber is a non-polar polymer prepared by emulsion copolymerization of styrene and butadiene. Due to its high hardness, rigidity, aging resistance and excellent mechanical strength, it is widely used in tires, soles, rubber rollers, electrical insulation materials and plastic toughening and modification. Its characteristics such as oil resistance, tear resistance and good compatibility with natural rubber make it an important material in the industrial and consumer fields. In 2024, the global high styrene rubber (combined styrene content 40%-60%) market size is US\$234 million, and it is expected to reach US\$324 million in 2031 (CAGR 4.5%), with China as the main growth driver. Lightweighting of automobiles, high-end electronics and electrical appliances, and upgrading of packaging materials are the core driving forces. The market share of hydrogenated modified HSR (HSBS) will increase from 25% in 2024 to 34% in 2025, and is expected to exceed 50% in 2030. At the same time, the investment in research and development of bio-based HSR will increase by 25% annually. The domestic styrene self-sufficiency rate will increase to 60% in 2030, and the top five companies (such as Asahi Kasei, LG Chem, etc.) has a market share of 63%. Its technical direction focuses on low VOC, resistance to extreme environments and degradable materials. At the policy level, the "14th Five-Year Plan" promotes the

greening of the industry, but it faces risks such as fluctuations in crude oil prices, trade barriers between Europe and the United States, and carbon tariffs. In the future, high-performance and environmentally friendly products will become the mainstream.

The global High Styrene Rubber (HSR) market size was estimated at USD 234.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
