Report Overview

High temperature ceramic coating is often referred to as an exhaust coating, header coating or high heat coating. High temperature coatings are designed to prevent corrosion of exhaust systems and engine components. Corrosion is the breaking down of essential properties due to exposure to moisture in the air. The high temperature coating product can withstand temperatures in excess of 1200 degrees and some coatings can withstand temperatures higher than 1600 degrees. The high temperature coating process can also increase the durability and provide thermal insulation to the exhaust system. This durable ceramic coating runs between 2 and 4 mils thick and provides a hard finish which is resistant to rust and chipping. This coating process has an excellent adhesion and is abrasion resistant.

The global High Temperature Ceramic Coatings market size was estimated at USD 1210.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
