### Report Overview

Gaskets manufactured from high temperature materials are designed for applications involving, exhaust, combustible fluids, flame, and elevated temperatures. High temperature materials such as graphite, fluorosilicone, polytetrafluoroethylene, and fiberglass provide high reliability seals at high temperatures where traditional gasket materials are ineffective.

High Temperature Gasket material is used for applications that will have continuous temperatures from 350°F to 2300°F. Applications with intense heat, high pressure, saturated steam or hot oils can quickly lead to gasket failure if the wrong material is designated for use.
