Abstracts

High-temperature industrial heat pumps collect the waste water and waste gas of low- and medium-temperature waste from industrial enterprises through high-temperature heat energy heat pumps, and convert them into water or high-temperature steam > 70?, which can be used in industrial processes or heating. Traditional coal-fired boilers are the best choice for realizing industrial energy saving, reducing consumption and improving efficiency. As a renewable energy equipment, high temperature heat pump has the characteristics of energy saving, environmental protection, and low carbon emissions in heating, and has good market prospects and huge market growth potential. The high temperature heat pump heating industry in China is still in its growth stage. Although the market size of the high temperature heat pump industry has been increasing year by year, it accounts for a very small proportion of the total heating industry. In general, high temperature heat pump technology can replace traditional heating boilers and avoid the emission of large amounts of harmful gases from coal-fired and oil-fired boilers. At the same time, it can make full use of industrial waste heat, improve energy utilization, and enhance economic and social benefits. Therefore, high temperature heat pumps have broad development prospects in my country and are worthy of vigorous promotion.

The global High Temperature Industrial Heat Pump market size was estimated at USD 828.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
