Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on High Temperature Resistant Defoaming Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. High-temperature defoamers are products that maintain stability and high activity in high-temperature environments (typically 100°C to 200°C or even higher). Formulated from heat-resistant ingredients such as modified silicone, high-molecular-weight polyether, or mineral oil, they exhibit excellent thermal stability, chemical inertness, and sustained foam suppression. They effectively suppress and eliminate stubborn foam in industrial processes such as high-temperature reactions, distillation, fermentation, heat treatment cleaning, oil refining cracking, and papermaking black liquor concentration, preventing overflow, reduced heat transfer efficiency, or process interruptions caused by foam. They are widely used in high-temperature operations such as the chemical, petroleum, papermaking, food, and pharmaceutical industries. In 2024, the global production of high-temperature resistant defoaming agents will reach 5,261,380 tons, with an average selling price of US\$782 per ton.

The global High Temperature Resistant Defoaming Agent market size was estimated at USD 4114.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
