In 2024, global High Temperature Sterilization Underwear Washing Machine production reached approximately 1,640 K units, with an average global market price of around US\$ 225.3 per unit. A High Temperature Sterilization Underwear Washing Machine is a specialized compact washing appliance designed to clean and sanitize delicate garments such as underwear, socks, and baby clothing by utilizing high-temperature water or steam sterilization technology. Unlike conventional washing machines that focus primarily on mechanical washing and detergent cleaning, this type of washer emphasizes hygiene by operating at elevated temperatures—often above 60°C—to effectively kill bacteria, viruses, and other microorganisms that may remain in fabrics after normal washing. Many models incorporate additional features such as UV sterilization, ozone cleaning, or separate compartments to prevent cross-contamination between underwear and other clothes, ensuring a higher standard of personal hygiene. With a compact design suitable for bedrooms, bathrooms, or dormitories, and a focus on health-conscious living, high temperature sterilization underwear washing machines are increasingly popular among consumers who prioritize cleanliness, safety, and convenience in daily laundry care.

The global High Temperature Sterilization Underwear Washing Machine market size was estimated at USD 369.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
