Abstracts

High thermal conductivity graphite film is a thermal interface material which is very thin, synthetically made, has high thermal conductivity, and is made from a highly oriented graphite polymer film. It is ideal for providing thermal management/heatsinking in limited spaces or to provide supplemental heat-sinking in addition to conventional means. This material is flexible and can be cut into customizable shapes. This material can spread heat from a heat source quickly, and can decrease the temperature of it. According to the SEMI report, the semiconductor materials market will grow by 8.6% in 2022, reaching a market size of 69.8 billion US dollars new highs. Since semiconductor materials belong to high-tech barrier industries, most of the high-end products of semiconductor materials are currently concentrated in the United States, Japan, Germany and other countries and regions. From the perspective of demand, China Taiwan, China mainland, South Korea, Japan, and the United States are the largest semiconductor material markets in the world, accounting for more than 80% of the global market. In 2022, relying on its wafer foundry capabilities and advanced packaging base, China Taiwan continued to occupy the throne of the global semiconductor material market with sales of US\$16.17 billion; China had the strongest year-over-year growth in 2022, coming in second with \$13.87 billion in sales; South Korea remained the third-largest consumer of semiconductor materials. According to our Semiconductor Research Center, in 2022, the global semiconductor materials was valued at US\$ 70.3 billion. The semiconductors materials are mainly dominated by companies from US, Japan and few European countries. China Taiwan, China mainland, South Korea the key three market, hold a combined share over 60 percent. United States, Japan, Europe and Southeast Asia are also key market, have a combined about 35 percent. The key drivers are high performance computing, AI, cloud computing, Servers, 5G and EV (electric vehicle), etc. According to our Semiconductor Research Center, in 2022, the global semiconductor packaging materials was valued at

US\$ 25.73 billion. The semiconductors packaging materials are mainly dominated by companies from Japan, South Korea, China Taiwan, US and China mainland, etc. The key drivers are the demand from High-performance chips, 5G, artificial intelligence (AI), cloud computing, Servers, etc. The development of new materials and processes to enable chips with higher transistor density and greater reliability are also contributing to market growth.

The global High Thermal Conductivity Graphite Film market size was estimated at USD 1184.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
