Report Overview

High Throughput Screening (HTS) is a process widely used in the pharmaceutical industry to quickly and efficiently test a large number of chemical compounds for their biological or biochemical activity. By automating the testing process, HTS allows researchers to rapidly identify active compounds that could potentially be developed into new drugs. This method involves the use of robotics, data processing software, and sensitive detectors to screen thousands to millions of compounds in a relatively short period of time. HTS has revolutionized the drug discovery process by significantly reducing the time and cost involved in identifying potential drug candidates.

The market for High Throughput Screening (HTS) is experiencing significant growth driven by several key factors. The increasing prevalence of chronic diseases, such as cancer and cardiovascular disorders, has led to a growing demand for new and more effective drugs, driving the need for efficient drug discovery processes like HTS.
