Report Overview

High voltage protection tube is an electronic component designed to protect sensitive electronic devices from high-voltage surges and transient effects. It is also known as a gas discharge tube or gas tube lightning arrester. The protective tube contains a gas mixture that ionizes when high voltage surges or transients occur, providing a low resistance path for overcurrent. This helps to protect downstream electronic devices from the impact of surges, as excess current is diverted. High voltage protection tubes are commonly used in power distribution systems, telecommunications equipment, and other applications where high-voltage surges and transients can cause damage to sensitive electronic devices.
