Abstracts

High Wear-Resistant Polyurethane Screen Plate is a component of screening equipment made of polyurethane material with high wear resistance. It is made mainly of polyurethane through specific formulas and processing techniques such as casting and molding. This screen plate has excellent wear resistance and can withstand the frequent impact and friction of a large amount of materials. Compared with traditional metal screen plates, its wear life can be significantly extended. Meanwhile, it also has good elasticity, corrosion resistance and anti-aging properties, and can maintain stable performance in different working environments. The shape and size of the screen holes of the high wear-resistant polyurethane screen plate can be customized according to different screening requirements. It is widely used in material screening operations in industries such as mining, coal, metallurgy and construction, which can effectively improve the screening efficiency, reduce the equipment maintenance cost and prolong the service life of the equipment.

The global High Wear-Resistant Polyurethane Screen Plate market size was estimated at USD 117.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
